Summary

Data Engineer with experience in Python, SQL, Java, and Shell scripting, specializing in backend automation, API-driven workflows, and scalable data processing using Databricks and Spark. Skilled in query optimization, workflow scheduling, monitoring, troubleshooting, and production support. Hands-on exposure to Azure cloud services, Databricks, CI/CD concepts, Git-based version control, and workflow orchestration.

Technical Skills

Data Engineering: ETL/ELT Pipeline Design, PySpark, Delta Lake, MERGE Operations, Data Quality, Batch Processing, DBT, Azure Data Lake Storage

Databases & Query: Teradata, Snowflake, MySQL, MongoDB, SQL optimization, BTEQ, large-scale structured data

Cloud & Platform: Azure, Databricks, Spark, Snowflake

Orchestration & Automation: AutoSys, Shell Scripting, Python, CI/CD concepts, Git

Monitoring & Visualization: Tableau, Power BI, ServiceNow

Languages: Python, SQL, Shell Scripting, Core Java

Professional Experience

Bitwise – Data Engineer L2

Nov 2024 – Present

- Automating **12+ SQL production workflows** using BTEQ — eliminating **~30% of manual operational effort** and reducing batch failure risk in critical pipelines.
- Sustained **99%+ uptime** on a large-scale **Teradata database environment** through scripted performance tuning, access control management, and automated backup recovery processes.
- Scheduled and monitored **20+ production workflows** in AutoSys; drove **average incident resolution under 2 hours** and **zero SLA breaches** through scripted alert handling and cross-team coordination.
- Monitored and analyzed **10+ real-time KPIs** (latency, job success rate, error frequency) using pre-built **Tableau dashboards**, enabling faster issue identification and resolution while reducing manual reporting efforts.
- Standardized incident documentation in **ServiceNow**, reducing repeat production incidents through root-cause analysis and scripted post-mortem templates.

Projects

End-to-End Data Pipeline with Monitoring & Alerting | *PySpark, SQL, Delta Lake, Databricks, Power BI*

- Architected a **production-grade ETL/ELT pipeline** on **Databricks** using **PySpark** and **Delta Lake**; implemented **multi-source API-based ingestion**, **Delta Lake MERGE (upsert) operations**, and automated workflow scheduling.
- Built **end-to-end pipeline observability** with automated alerting mechanisms and **Power BI dashboards** tracking data quality, SLA compliance, and pipeline health metrics in real time.
- Applied **Medallion Architecture (Bronze/Silver/Gold)** principles for structured data refinement and **ACID-compliant** data operations across the lakehouse.

E-Courier – Full-Stack Data Application | *Java, Servlets, JDBC, MySQL, HTML/CSS, JS*

- Designed and optimized **normalized MySQL database schemas** for a logistics platform; implemented **efficient SQL query patterns** for high-frequency read/write operations across customer, order, and delivery entities.

Education

DY Patil Institute Of MCA and Management, Pune

2023 – 2025

Master of Computer Applications | 9.08 CGPA (Rank 1 – Twice)

Achievements

Two-Time MCA Rank 1 Holder

Batch Topper in BCA – Graduated with 8.93 CGPA

Certifications

Databricks Certified Data Engineer Associate – Databricks

Python for Data Science, AI and Development – IBM

Agile Project Management – Google

Generative AI for Beginners – Udemy
